

Initiative	Develop and Implement an Enterprise Portal
Description	Enterprise Portal is a single, personalized point of secure access to the key information and services that employees, citizens and partners need to conduct business. Enterprise Portal Features include personalization, collaboration, instant messaging, E-meetings, bulletin boards, document sharing, publishing capabilities, enables single sign-on, and search and retrieval of unstructured information.
Support of Goal(s)	<ol style="list-style-type: none"> 1. Citizen Service: Citizens will be allowed to create and personalize their portal to obtain current information relevant to their needs. 2. Collaboration: The portal comes with tools such as instant messaging, document sharing, bulletin boards, E-meetings, and others as needed. 4. Common Solutions: Portal technologies are needed by many agencies. Implementing a single portal solution will contain costs. 5. Continuous Improvement: Next generation accessIndiana which combines citizen, business and employee access to government information. The common access point reduces training and support costs. 6. Customer Service: Employees will be allowed to create and personalize their portal to obtain current information relevant to their needs.
